

COMPANY OVERVIEW

Poursuite, Inc. is a small software engineering firm serving public agencies. Lead engineers drive every build; principal architects with 25+ years each design the system and step in wherever the problem calls for them.

CORE COMPETENCIES

Web & digital experience — Accessible, fast public websites and online services for residents.

- Redesign a county website to WCAG 2.1 AA, including templates, navigation, and content migration.
- Build a public service portal with accessible forms and clear application status information.

Data, analytics & reporting — Pipelines, warehouses, and reports, from source records to published numbers.

- Migrate a legacy Oracle reporting database to a modern warehouse.
- Build data pipelines and program dashboards for grant reporting.

Integrations — Connecting legacy systems, vendors, and new tools without starting over.

- Connect a permitting system to a payment processor and reconcile transactions.
- Integrate a constituent request platform with existing work-order and case-management systems.

Applied AI — Practical assistants and automation, built on your data and evaluated before launch.

- Build a staff assistant for searching policy documents, with citations to source passages.
- Evaluate retrieval-augmented generation for agency knowledge bases and document the results.

DIFFERENTIATORS

The people you meet are the people who build. The engineers on your calls scope, build, and deliver every engagement. No handoff to a bench.

You own everything we make. Source code, data, documentation, and credentials transfer to you. No lock-in.

Small on purpose. No management layers to pay for; decisions made by the people doing the work.

Pursued to done. We carry work through launch and a documented handoff, not just to a deadline.

TEAM EXPERIENCE

Our lead engineers drive the build on every engagement. Principal architects design the system and step in wherever the problem calls for them.

Lead engineer · data engineering and integrations · event-driven pipelines, legacy-system migrations, master data

Lead engineer · applied AI · LLM evaluation, agents and retrieval, model serving at scale

Principal architect · 25+ years · payments, fraud detection, KYC, platforms from zero

Principal architect · 25+ years · Oracle databases and enterprise systems

Principal architect · 25+ years · data warehousing (Snowflake), analytics, reporting

Billions of records engineered across production data platforms

Hundreds of millions AI requests served on platforms our engineers helped build and scale
